

The AI Letter

by Freedom with AI

Hello {{contact.first_name}}, We're delighted to welcome you to your ultimate AI resource hub, teeming with the latest news, profound insights, and innovative resources!

In this edition, we've got a thrilling line-up for you:

1. A roundup of the week's significant AI advancements.
2. Our top-picked AI tools, curated from extensive research.
3. Unleashing the practical uses of AI in your daily life.

Let's dive in and explore the limitless possibilities of AI together! 🚀

📌 AI breakthroughs of the week

1. AI Helps a Paralyzed Man Walk Again.

After a motorcycle accident in 2011, Gert-Jan Oskam couldn't walk because of a spinal cord injury. But thanks to an AI-powered implant, he's now back on his feet. It's like a digital messenger between his brain and spine. The device is called a brain-spine interface that can pick up Oskam's thoughts about wanting to walk through electrical activity in the cortex. This signal travels to an external computer he wears and is then sent to a spinal implant in Oskam.

2. Japan Opens Data Doors for AI

Here's some news from Japan - the government has decided to let go of copyrights for data used in AI training. This is huge because it's going to speed up their AI advancements. They were worried that copyright issues, especially with anime and visual stuff, were slowing them down.

3. The Future of Advertising is AI

Guess what? WPP, the biggest advertising agency in the world, is teaming up with Nvidia to make ads using AI. They're using Nvidia's Omniverse platform to make even better-quality stuff. And Google? They're using this AI superpower to create personalized ads for you.

4. Nvidia launches another AI tool - Neuralangelo

Nvidia has a cool new AI model called Neuralangelo. It can take 2D videos and turn them into 3D structures. Imagine having lifelike virtual copies of buildings, sculptures, and anything else. Now that's a game-changer!

🌟 Curated picks (Tools & Resources)

GPTAgent

Build Your Own AI Apps in Minutes. GPTAgent makes it super easy and fast to build your own AI applications ranging from chatbots AI and web apps to workflow automation without a single line of code.

💬 Things you can do with AI

1. Creating Viral Reels in seconds

Kaiber AI helps you create stunning animated videos with text commands. One reel video created using Kaiber AI on Instagram has gone viral with over 28 million views and 2.6 million likes. Reels are the easiest way to go viral on Instagram, and this method is incredible. Just upload your files, describe your vision, or use pre-designed styles, customize your settings, select a starting frame, and download your video to share with the world.

2. Let AI handle your Phone calls

Remember when Google showed off "Duplex" at I/O 2018? That was a huge moment for AI. Duplex is a tool that can make phone bookings for things like hair appointments and restaurant reservations. It can handle surprises like unexpected questions or strong accents without missing a beat. This gives us a glimpse into the future capabilities of AI assistants like Google Home, Alexa, and Siri. Duplex is not publicly released yet. But, the possibility is near future.
